

F4 test for investigating admixture events

Hassan Shafiey
July 23th, 2018

[From lesson 6] Interpretation of the f4 is not straightforward, so we fix the position of one population as the outermost population in the tree(outgroup population). Now the investigation of other three is easier.

Two kinds of genetic event:

All possible configurations

All possible configurations

Cladal relationship

Admixture event

Presence Of a ghost population

Just for completeness of our list

Quiz

what about these topologies: should we include them in our list?

ghost population is inside the three pops

[From lesson 6] Three unique D values for each set of four pops

- 1
- $D1(X, Z; Y, O) > 0$
 - $D2(Y, Z; X, O) > 0$
 - $D3(X, Y; Z, O) \sim 0$

- 2
- $D1(X, Z; Y, O) = \text{any value}$
 - $D2(Y, Z; X, O) > 0$
 - $D3(X, Y; Z, O) < 0$

- 3
- $D1(X, Z; Y, O) = \text{any value}$
 - $D2(Y, Z; X, O) > 0$
 - $D3(X, Y; Z, O) < 0$

- 4
- $D1(X, Z; Y, O) \sim 0$
 - $D2(Y, Z; X, O) \sim 0$
 - $D3(X, Y; Z, O) \sim 0$

Example 1: Exploring {AFR, nAFR, Altai}

Quiz:

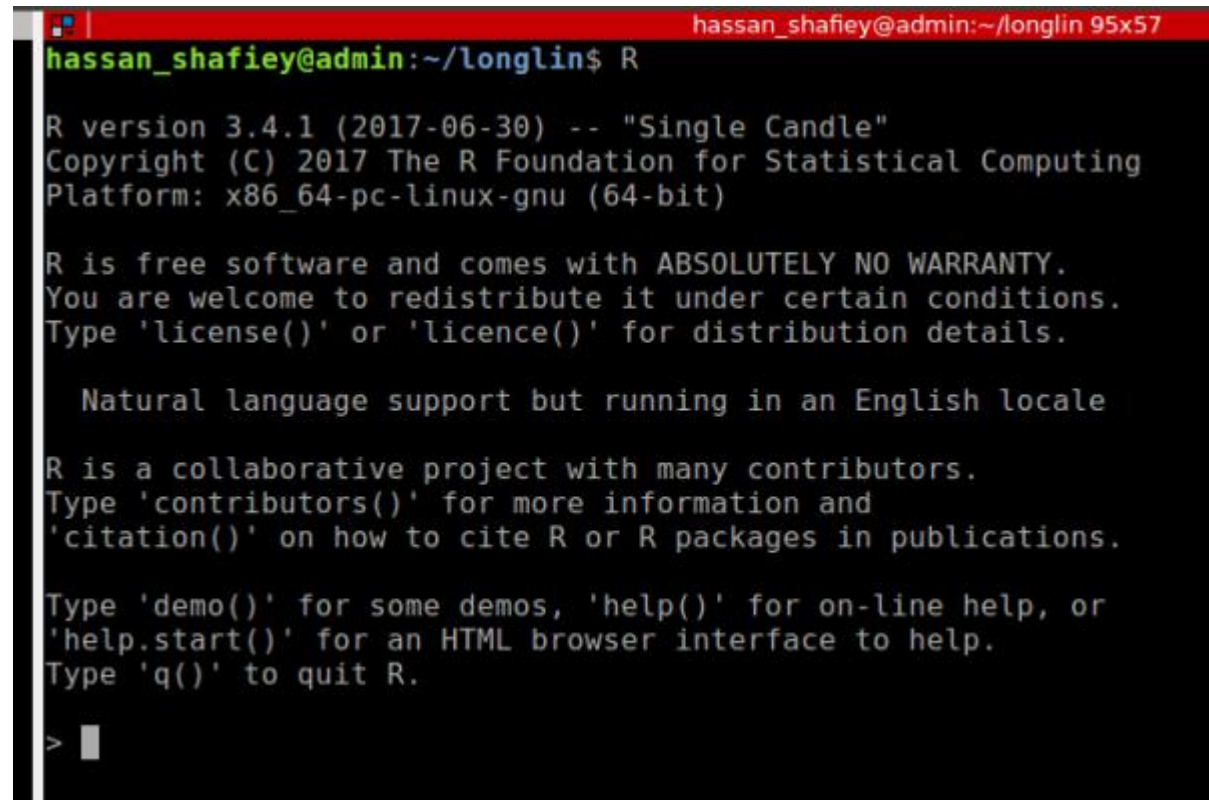

1. Which one is a correct (and the best) choice for an outgroup?
 - a. Mbuti (an African population)
 - b. Bonobo(an African ape)
 - c. Australian Mouse
 - d. Denisovan(a Asian sister group for Neanderthal)
 - e. Homo erectus (One million year old sample)
2. What will happen if you decide to put a plant in the place of the outgroup?

Example1: Exploring east Asians relative to Europeans

EAS = c("Han", "She", "Uygur", "Yi")

English (as European) and Chimp (as outgroup)

On the server type R to enter R statistical software

A terminal window with a red title bar containing the text 'hassan_shafiey@admin:~/longlin 95x57'. The terminal text shows the command 'R' being executed, followed by the R version 3.4.1 startup screen. The screen displays the version, copyright information (© 2017 The R Foundation for Statistical Computing), platform (x86_64-pc-linux-gnu (64-bit)), and a disclaimer about warranty. It also provides instructions on how to use various R functions like 'license()', 'contributors()', 'citation()', 'demo()', 'help()', and 'q()'. The prompt '>' is visible at the bottom.

D1 and D2 in one table

D3

D1 and D2 in one table

D3

conclusions: 1. Han, She and Yi form a clade relative to English.
 2. Uyгур is admixed form of English and east Asians (!?)

Exercise 1: Try to repeat these tests using Mbuti as outgroup.

Example 2: The story of native Americans

It was believed that Native Americans are sister group to East Asians so we expect EUR to have a symmetric connection with both of them; but

1	pop1	pop2	pop3	pop4	D	Z	BABA	ABBA	#SNP

AME = {Karitiana, Surui},
nEUR = {English, French},
EAS = {Han}

Quiz: Try to find three D values for the set {AME, nEUR, Han} using Mbuti as outgroup.

D(EAS, nEUR ; AME, Mbuti)

D(AME, nEUR ; EAS, Mbuti)

D(EAS, AME ; nEUR, Mbuti)

$D1(X, Z; Y, O) > 0$
 $D2(Y, Z; X, O) > 0$
 $D3(X, Y; Z, O) \sim 0$

1

$D1(X, Z; Y, O) = \text{any value}$
 $D2(Y, Z; X, O) > 0$
 $D3(X, Y; Z, O) < 0$

2

our models:

$D1(X, Z; Y, O) = \text{any value}$
 $D2(Y, Z; X, O) > 0$
 $D3(X, Y; Z, O) < 0$

3

$D1(X, Z; Y, O) \sim 0$
 $D2(Y, Z; X, O) \sim 0$
 $D3(X, Y; Z, O) \sim 0$

4

our observations:

$D(\text{EAS}, \text{nEUR} ; \text{AME}, \text{Mbuti}) > 0, Z \sim 23$
 $D(\text{AME}, \text{nEUR} ; \text{EAS}, \text{Mbuti}) > 0, Z \sim 30$
 $D(\text{EAS}, \text{AME} ; \text{nEUR}, \text{Mbuti}) < 0, Z \sim 6$

Which model can explain the observations?

$D1(X, Z; Y, O) > 0$
 $D2(Y, Z; X, O) > 0$
 $D3(X, Y; Z, O) \sim 0$

1

$D1(X, Z; Y, O) = \text{any value}$
 $D2(Y, Z; X, O) > 0$
 $D3(X, Y; Z, O) < 0$

2

our observations:

$D(\text{EAS}, \text{nEUR}; \text{AME}, \text{Mbuti}) > 0, Z \sim 23$
 $D(\text{AME}, \text{nEUR}; \text{EAS}, \text{Mbuti}) > 0, Z \sim 30$
 $D(\text{EAS}, \text{AME}; \text{nEUR}, \text{Mbuti}) < 0, Z \sim 6$

Which model is the true one?

our models:

$D1(X, Z; Y, O) = \text{any value}$
 $D2(Y, Z; X, O) > 0$
 $D3(X, Y; Z, O) < 0$

3

H3:

H2:

Need a direct measure of admixture; 3 population test

f_3 test tells you if target population K is a mixed form of source populations H and G (or their related populations).

Quiz: What are all possible arrangements of three population?

All possible arrangements of three population:

Exercise 2: Convince yourself that all scenarios, except one case of model 2, result in positive value for f_3 .

If $f_3(A, B; C) < 0$ then C is a mixed form of ancestries related to A and B .

Quiz: For a 3 population test $f_3(H, G; K)$, which one is true?

1. f_3 statistic is the overlapping the paths H to K and G to K .
2. $f_3 = E[(k-h)(k-g)]$
3. $f_3 = \text{cov}[(k-h), (k-g)]$

Quiz: Using data file "Lesson8_2.log", pick up relevant f3 tests to find an evidence in favor of /against hypothesis H1.

AME = {Karitiana, Surui},
nEUR = {English, French},
EAS = {Han}

All files relevant to lesson 8 are located in:
`/public/adna/student/2018class/shafiey_hassan`

Set $G = \{\text{Sardinian}, \text{Greek}\}$ in model H1 and check with D and f3 tests.

Quiz: Use file "Lesson8_1.log" and "Lesson8_2.log" to find the following test values.

$D(G, \text{AME}; \text{nEUR}, \text{Mbuti})$

$D(\text{nEUR}, \text{AME}; G, \text{Mbuti})$

$D(G, \text{nEUR}; \text{AME}, \text{Mbuti})$

$f3(G, \text{AME}; \text{nEUR})$

Set $G = \{\text{Sardinian}, \text{Greek}\}$ in model H1 and check with D and f3 tests.

Quiz: Use file "Lesson8_1.log" and "Lesson8_2.log" to find the following test values.

$$D(G, \text{AME}; \text{nEUR}, \text{Mbuti}) > 0$$

$$D(\text{nEUR}, \text{AME}; G, \text{Mbuti}) > 0$$

$$D(G, \text{nEUR}; \text{AME}, \text{Mbuti}) < 0$$

$$f3(\text{Sardinian}, \text{AME}; \text{nEUR}) < 0$$

conclusion: both models are true. How is it possible?

H1:

H2:

Quiz: Is there a simpler scenario?

H1:

H2:

H2 northern EUR ← eastern SIB H1

H2 northern EUR ← Ghost → eastern SIB H1

Finding ghost

We are looking for a population which

1. lived in central Siberia at least 15 000 years ago.
2. contributed to the ancestor of native Americans.
3. contributed to the ancestor of northern Europeans.

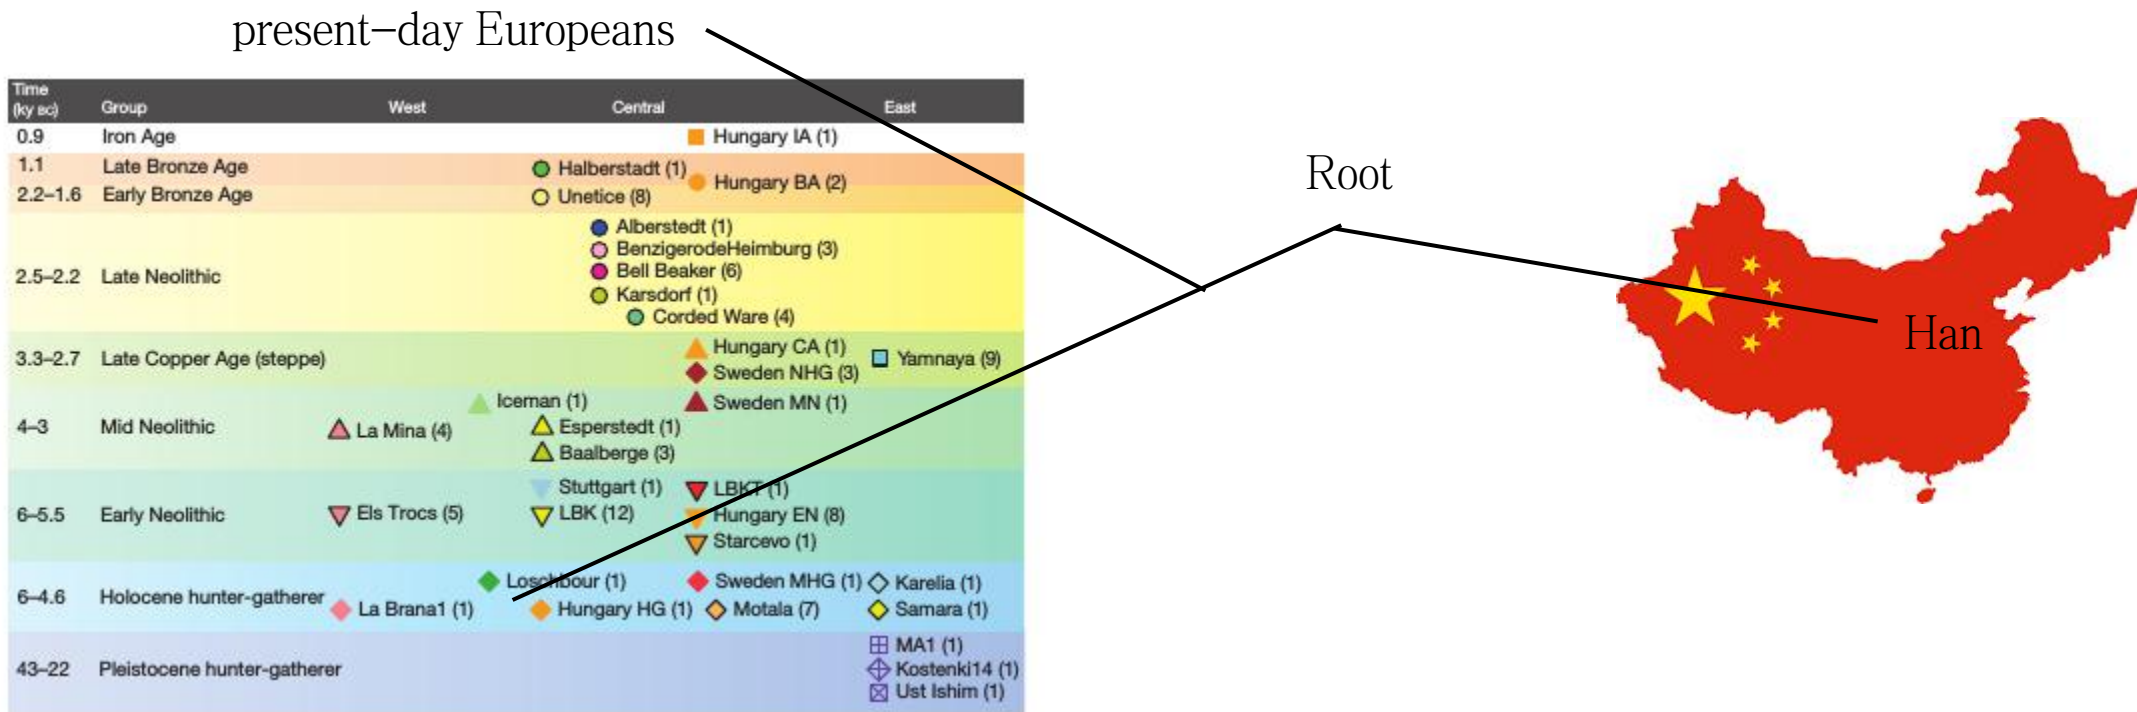

Exercise 3: One the following populations is the ghost. Run whatever tests you need to figure out which one is the ghost we are looking for.

Malta1, Kostenki14, Tianyuan, UstIshim

Exercise 4: We saw that while f3 test shows admixture in nEUR, it doesn't show admixture in AME? Chat with each other and with Melinda, Hongru, Albert, or myself to figure out the reason.

Example 3: The story of Europeans

Classical archaeological scenario: Modern humans migrated to Eurasia about 60 000 years ago and then splitted into EAS and EUR. So we expect to have a cladal relationship between pdEUR and WHG(Western hunter gatherers).

Quiz: What would you expect to get for the following tests if this hypothesis is true?

D(EUR, EAS; WHG, Mbuti)

D(WHG, EAS; EUR, Mbuti)

D(EUR, WHG; EAS, Mbuti)

Use the stock of D statistics in </public/adna/student/results/> to find them.

where EUR = {Englih, French}, EAS = {Han}, WHG = {Loschbour, LaBrana}

$D(\text{EUR}, \text{WHG}; \text{EAS}, \text{Mbuti}) < 0, Z \sim 3$

Which model is the true one?

our models:

$D1(X, Z; Y, O) = \text{any value}$
 $D2(Y, Z; X, O) > 0$
 $D3(X, Y; Z, O) < 0$

3

H3:

H2:

Based on previous knowledge we can reject H1 and H3 so we left with H2:

Quiz: Use table S11.1 from page 85 of Lazaridis2014 paper supplementray information file to find most plausible sources for present day Europeans.

Quiz: Use table S11.1 from page 85 of Lazaridis2014 paper supplementray information file to find most plausible sources for present day Europeans.

1. present-day Europeans can be best modeled as mixture of either {Stuttgart and ANE} or {WHG and Near Easterns}.
2. [From archaeology] Migrants from Anatolia nd Levant introduced agriculture to Europe.

Stuttgart is an admixed population of near Easterns and WHG.

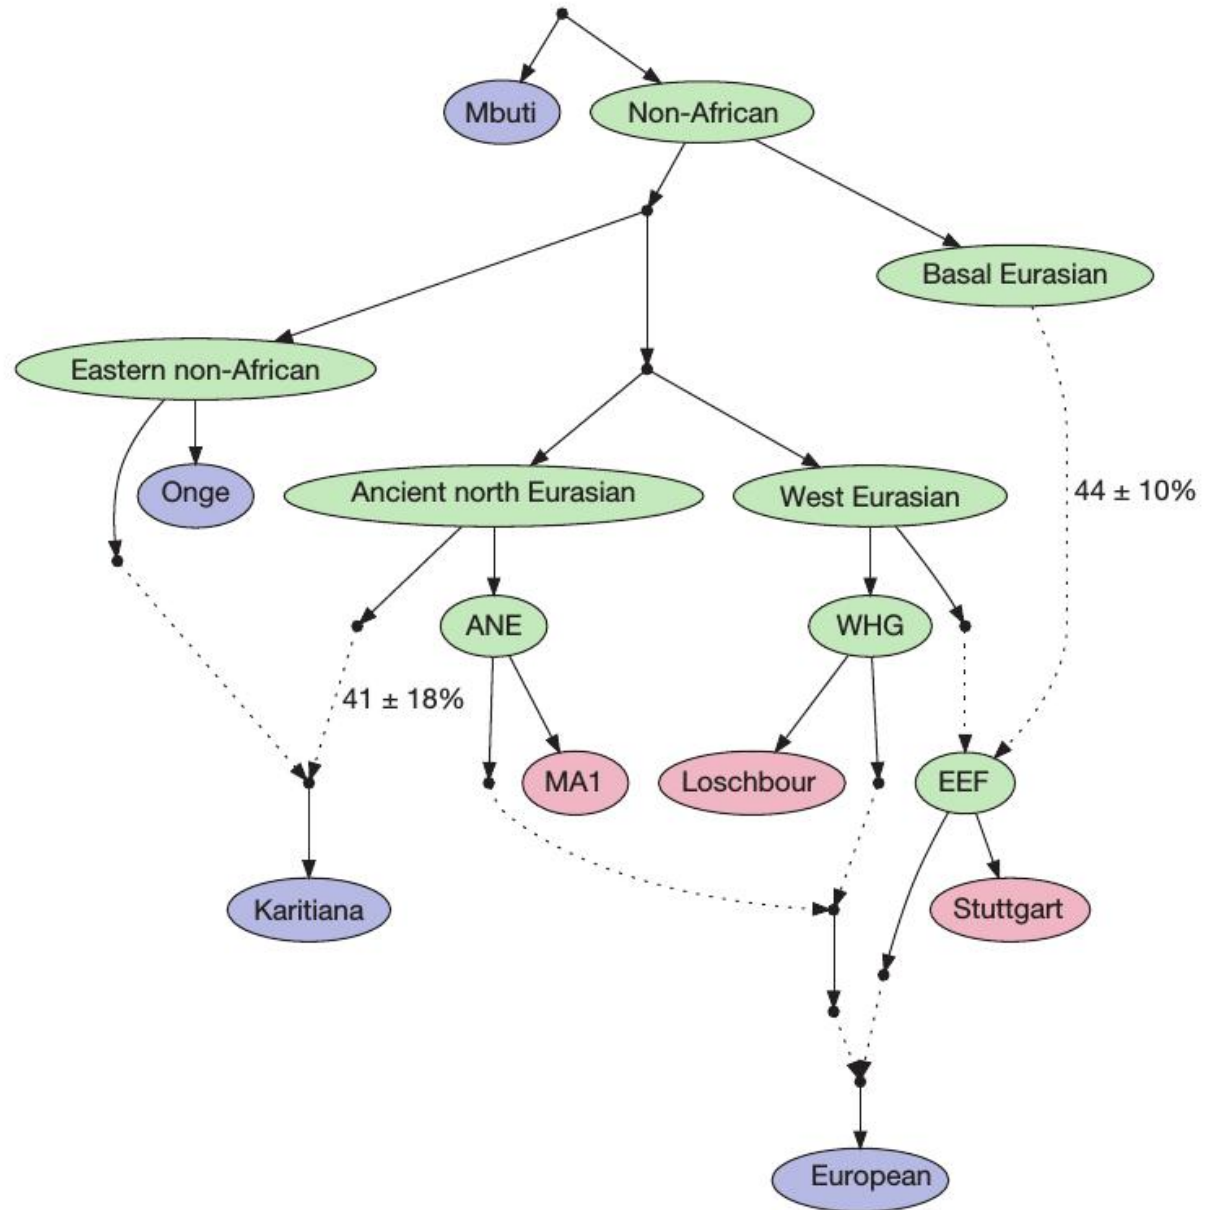

Lazaridis2014: Farmers from near East introduced Basal Eurasian ancestry to Europe and Stuttgart is one representative that carries such ancestry.

Quiz: Present-day Europeans carry three ancestries:

1. Basal Eurasian ancestry.

2. ??

3. ??

Quiz: [Lazaridis2014]:Present-day Europeans carry three ancestries:

1. Basal Eurasian ancestry.
2. ANE
3. WHG

How did ANE come to Europe?

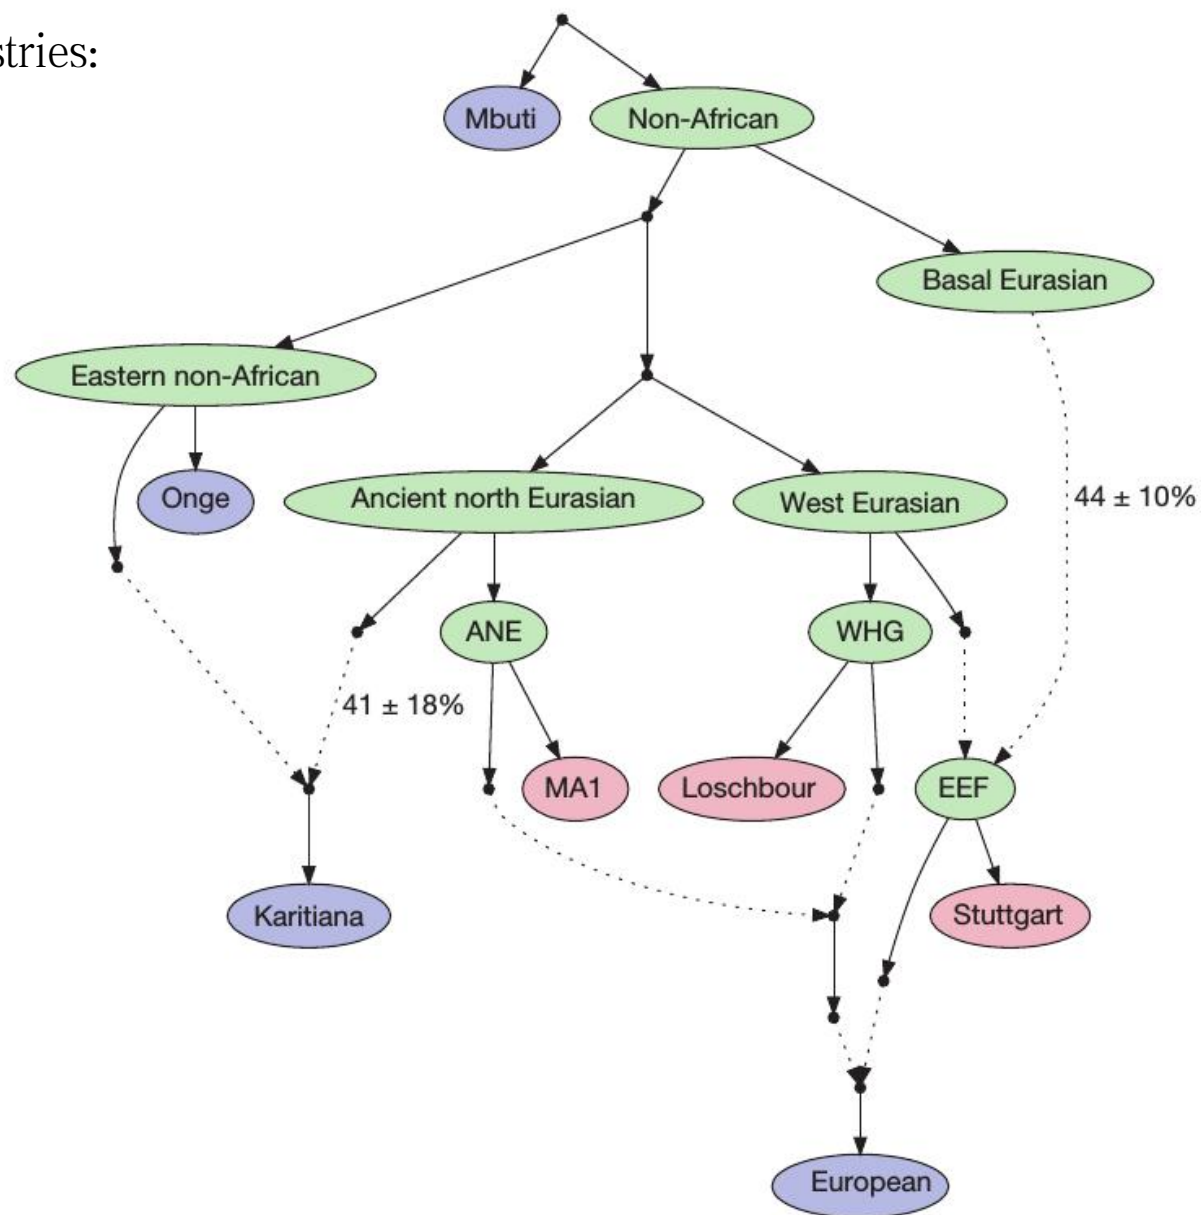

Quiz: [Lazaridis2014]:Present-day Europeans carry three ancestries:

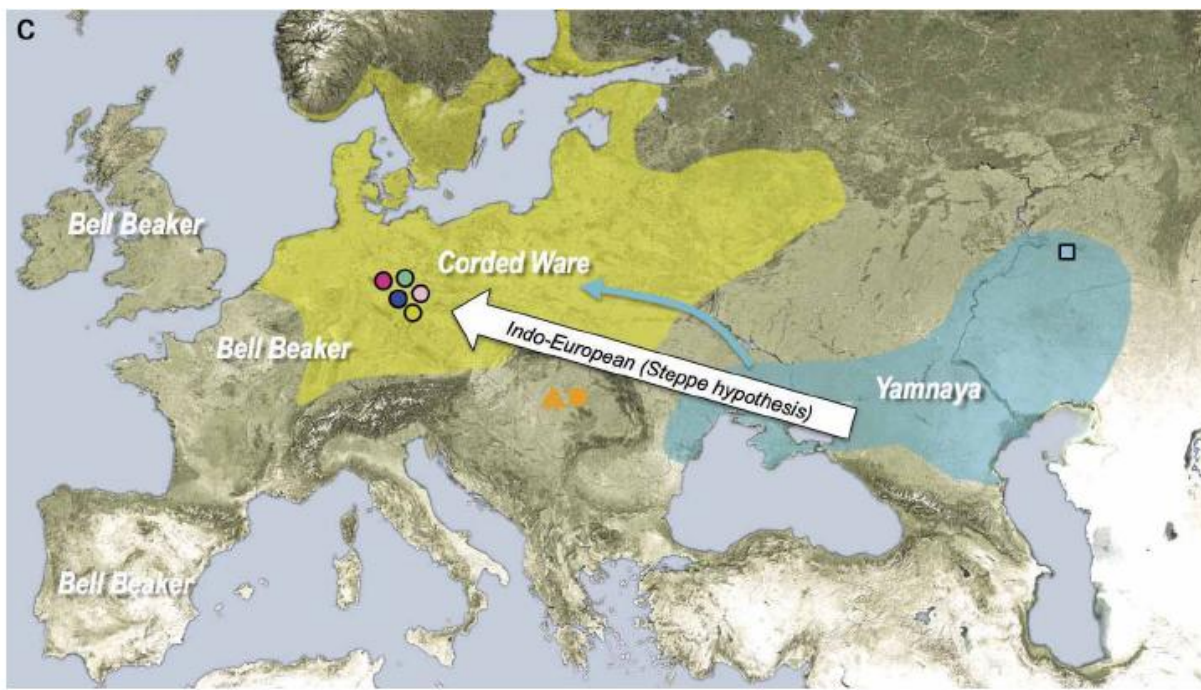

1. Basal Eurasian ancestry.
2. ANE
3. WHG

How did ANE come to Europe [Haak2015]?

What is the other message of the Haak2015 paper?

Massive migration from Steppe to Europe can explain the origin of Indo–European languages in Europe. Leo S. Klejn critiques this idea.

Exercise 5: Read the pdf file of his discussion (available on the server) with Haak et.al. and summarize their arguments. Who is right? who argues more scientifically?

Exercise 6: Some of Native Americans have got european ancestry from two different ways. Do you know them? Can you explore these two admixture events using D statistics?

Exercise 7: There are two deep ancestries in Eurasia: East Asian and European. Life in the East of Asia is much more colourful than Europe. Do you think this difference has a genetic basis? Do a literature survey and feel free to contact people in Svante's, David's, and Eske's lab for investigating this.

See you on Wednesday at 9:00 for checking homework. I'll put the slides on the server after the class so you can have exercises.

Thanks for your patience; and those roses are for you all.
